

MEI, LLC

POWDER COATING

MEI's electrostatic powder coating provides a superior finish to a wide variety of materials. Utilizing custom coatings of Epoxy / Polyester / Urethane, we will custom coat your products to achieve the best possible finish available for your application. Typical finish properties include extreme corrosion, cut, chip & abrasion resistance, high temperature, UV, as well as FDA and Semiconductor grade coatings.

With on-site metal fabrication facilities we can repair or replace damaged parts in addition to building jigs and specialized hangers for those odd shaped, heavy or awkward items.
